

Ques. Print Hello World?

```
print('Hello World!!!')
```

Output:- Hello World!!!

Swap Two variables

Ques. swap two variables?

```
a = 11
b = 7

# -- Using a Temporary variable
temp = a
a = b
b = temp

print(a) # 7
print(b) # 11

# -- Without a temporary variable
a, b = b, a

print(a) # 7
print(b) # 11

# -- Using arithmetic operators
a = a + b # a = 18, b = 7
b = a - b # a = 18, b = 11
a = a - b # a = 7, b = 11

print(a) # 7
print(b) # 11

# -- Using multiplication and division operator
# To Swap the values of two variables using Addition and subtraction operator
P = P * Q
Q = P / Q
P = P / Q

print ("The Value of P after swapping: ", P)
print ("The Value of Q after swapping: ", Q)

# -- XOR swap
P = P ^ Q
Q = P ^ Q
P = P ^ Q

print ("The Value of P after swapping: ", P)
print ("The Value of Q after swapping: ", Q)
```
